

SwitchON Workshop

Miami, Jan. 8-9, 2015

Prof. Christian Esteve Rothenberg

Department of Computer Engineering and Industrial Automation (DCA)
Faculty of Electrical and Computer Engineering (FEEC)
University of Campinas (UNICAMP)

About: Christian Esteve Rothenberg

- Assistant Professor (tenure track) at FEEC/UNICAMP (since 2013)
 - Leading the INTRIG lab at DCA/FEEC/UNICAMP
INTRIG: Information & Networking Technologies Research & Innovation Group
 - Currently, supervising 6 PhD, 5 MSc candidates, and 4 undergrad students
- PhD in Electrical and Computer Engineering (FEEC/UNICAMP, 2010), MSc in Electrical Eng and Information Technology (Darmstadt University, 2006), Telecommunication Eng (Universidad Politécnica de Madrid, 2004)
 - Visiting researcher at Ericsson Research Nomadic Lab, Jorvas, Finland, 2008, participated in EU Publish/Subscribe Internet Routing Paradigm (PSIRP).
- Research Scientist at CPqD R&D Center in Telecommunication (2010-2013)
 - Technical Lead of SDN activities in the Converged Networking Division
- ONF Research Associate (since Apr/2013)

Research Interests and Main Goals & Results

- RouteFlow
(hybrid IP-SDN)

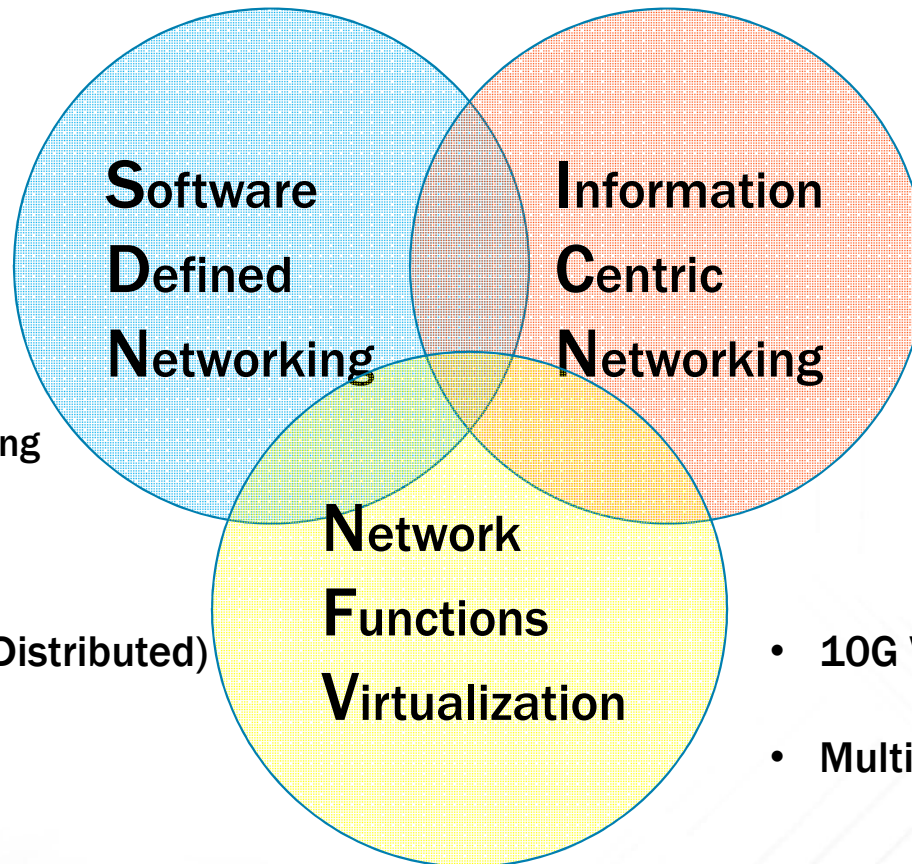

- softswitch13

- libfluid
(ONF Driver)

- SDN-2-SDN Peering

- MD2-NFV
(Multi-Domain Distributed)

- VNF-a-a-S

- Mini-CCNx -> Mini-NDNx

- Wireless / Mobility

- LIPSIN
(in-packet Bloom filters)

- 10G VNF

- Multi-Core Architectures

Research Projects and Open Source Results

Technical lead of successful open source projects:

- libfluid, winner of the ONF Driver Competition (Mar/2014)
 - <http://opennetworkingfoundation.github.io/libfluid/>
- softswitch13, first OpenFlow 1.2 and 1.3 soft switch, controller, and testing framework [funded and in technical collaboration with Ericsson] (2011 - 2013)
 - <https://github.com/CPqD/ofsoftswitch13>
- Mini-CCNx, fast prototyping and experimentation of CCN networks (2013 -)
 - <https://github.com/carlosmscabral/mn-ccnx>
- RouteFlow, first IP routing architecture for SDN (2010 -)
 - <https://github.com/routeflow/>

(Selected) Publications related to SDN

- **Software-Defined Networking: A Comprehensive Survey.**
Diego Kreutz, Fernando M. V. Ramos, Paulo Verissimo, Christian Esteve Rothenberg, Siamak Azodolmolky, Steve Uhlig. In Proceedings of the IEEE, Jan., 2015.

Management and Orchestration**

Peering Use Cases in Multi-Domain Distributed NFV

More info: "MD2-NFV: The Case for Multi-Domain Distributed Network Functions Virtualization". To appear in NetSys SDNFlex 2015, Cottbus, Germany, March, 2015.

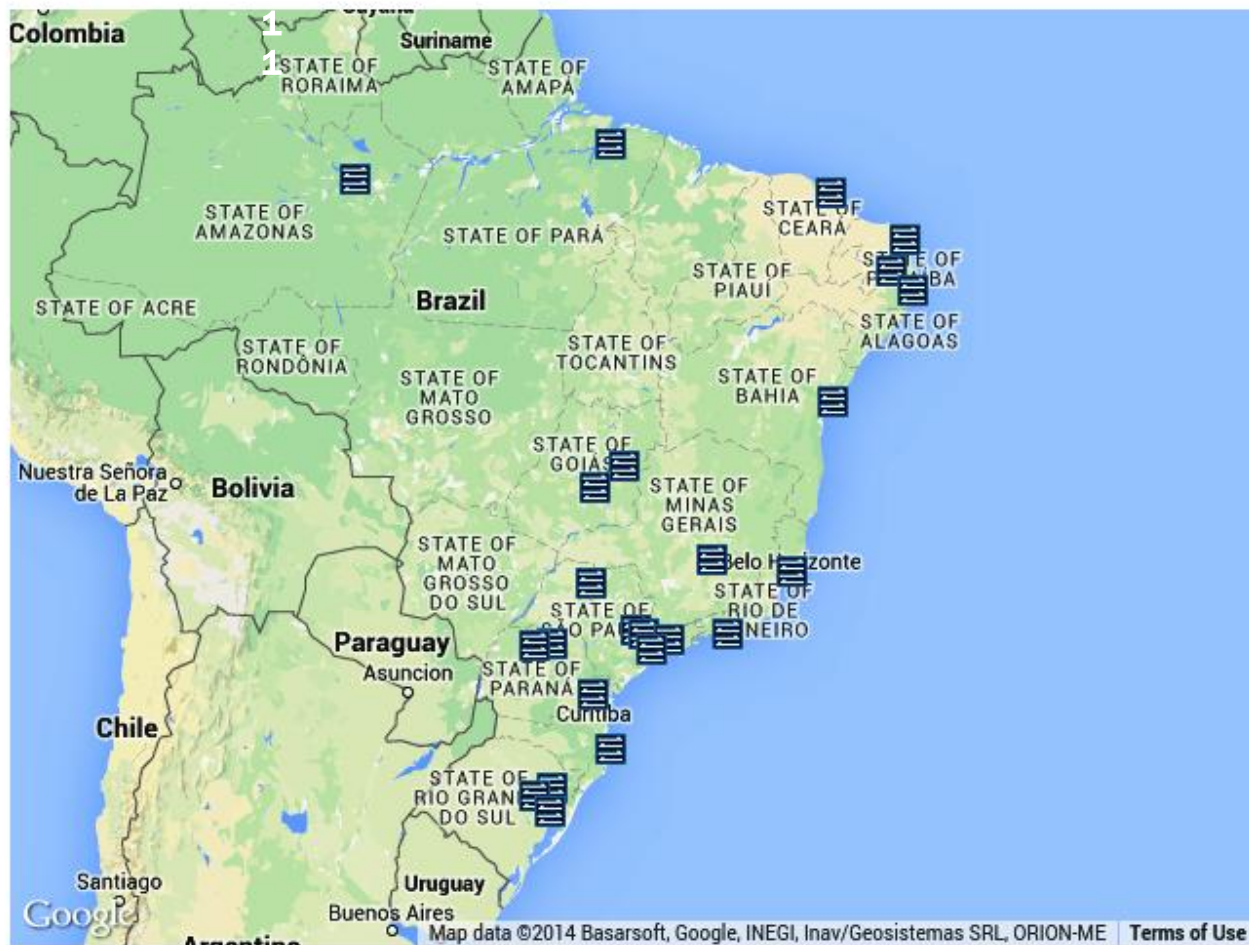

Related use cases under investigation: **Advanced Peering with a Software-Defined Knowledge Plane**

- **MD2-NFV**
 - Resource trading (computation, storage, network) between different domains to optimize VNF placement across providers (offering NFVI-as-a-Service)
- **Flash NFV-Benchmarking Service**
 - A fast, distributed benchmarking service to assess candidate locations in terms of computation and network (BW, latency, etc.) from multiple vantage points to support the decision of best location for target VNFs (“try before deploy”).
- **NfvQuery**
 - Network State & Management primitives for graph databases embodying multi-layer virtualized infrastructures based on semantic graph annotations
- **Meta-SDX: Interconnecting SDN-augmented Public IXPs**

PTTMetro in Brazil (PTT.br)

Location of Each Brazilian IXP (figure extracted from <http://www.ptt.br>)

Methodology: AS-level Graphs

- Data Sources
 - PTT.br Official Data at www.ptt.br
 - PeeringDB (we found it was unreliable)
 - Telnet Access to IXP's Looking Glasses (most important data source!)
 - BGP Table, Paths Summary, Communities List
- Graph analysis tools based on BGP adjacency matrix of all IXPs:
 - NetworkX <https://networkx.github.io>
 - Neo4j <http://neo4j.com>

Figure 1b. Example Graph of PTT-VIX (Vitória, ES)

Results

- Profile and Classification of IXP's Members
- AS Vertices's Degree / Depth / Diameter
- Density of Peering
- AS-Prepend for TE
- k-Clique Communities

Results

Analysis of ASes Profile in PTTMetro (PTT.br)								
Category	BRAZIL	+/-	DF	MG	RJ	RS	SP	VIX

Ongoing research project: Advanced Peering with a Software-Defined Knowledge Plane

- Duration: 24 months (Started in May/2014) [Funded by Ericsson]

Research Goals

Advanced Peering with a Software-Defined Knowledge Plane

- Investigate **SDN-SDN communication** options that allow SDN networks in different administrative domains to achieve **advanced peering agreements** beyond pure packet routing, for instance by integrating **best placement of content and applications**.
- Re-examine the concept of **Knowledge Plane** with the **visibility and SDN abstractions** (topology map, flow tuples, policy specification) and **direct control** capabilities (i.e., rich matching and instructions) of OpenFlow/SDN approaches.
- Design Knowledge Plane mechanisms for **querying (SDN) network properties** of participants at **IXPs**. **Define APIs** that allow operators to differentiate **and close the gap between applications and networks**, with **focus on optimizing content/application placement**.
- Develop **novel SDN control loops** (information gathering + knowledge generation + network actuation) leveraging SDN visibility (among other data sources) for data collection and network control via direct OpenFlow/SDN programmability or indirect via existing protocols (non-OF SDN).
- Design suitable data models and available **graph-oriented DBs (and/or big data stores for map-reduce like operations)** to embody the "Network Information Base" using annotated and semantically meaningful graphs.
- **Prototypes** of inter-SDN architecture and its building blocks for evaluation **and proof of concept** purposes. Software prototyping based on **OpenDaylight, NoSQL graph-oriented databases** (e.g. Neo4j, Titan), and **Hadoop-like** infrastructures.

Short-bio

- Christian Esteve Rothenberg is an Assistant Professor in the Faculty of Electrical and Computer Engineering at University of Campinas (UNICAMP), where he received his Ph.D. in Computer Engineering in 2010.
- From 2010 to 2013, he worked as Senior Research Scientist in the areas of IP systems and networking at CPqD Research and Development Center in Telecommunications (Campinas, Brazil), where he was technical lead of R&D activities in the field of OpenFlow and SDN such as the RouteFlow project, the OpenFlow 1.3 Ericsson/CPqD softswitch, or the ONF Driver competition.
- Christian holds the Telecommunication Engineering degree from Universidad Politécnica de Madrid (ETSIT - UPM), Spain, and the M.Sc. (Dipl. Ing.) degree in Electrical Engineering and Information Technology from the Darmstadt University of Technology (TUD), Germany, 2006.
- Christian holds two international patents and has over 70 publications including scientific journals and top-tier networking conferences such as SIGCOMM and INFOCOM. Since April 2013, Christian is an Open Networking Foundation (ONF) Research Associate.

Research Interests

- Network Architectures
- Routing & Forwarding
- Data Center Networks
- Cloud Networking
- SDN
- NFV
- ICN
